

TIDE POOL LAB!

WHAT IS A TIDE POOL?

Tidepools are the areas between tides! When the tide goes in, we are able to see the creatures that are hidden when it's high tide. These guys have special adaptations that help them live in many different conditions.

MINI TIDEPOOL FOOD WEB

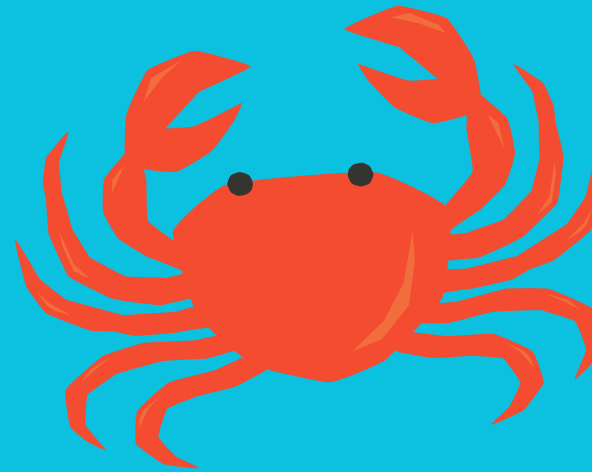

FUN FACTS!

Octopi can change their skin to camouflage in different environments. And they have 3 hearts!

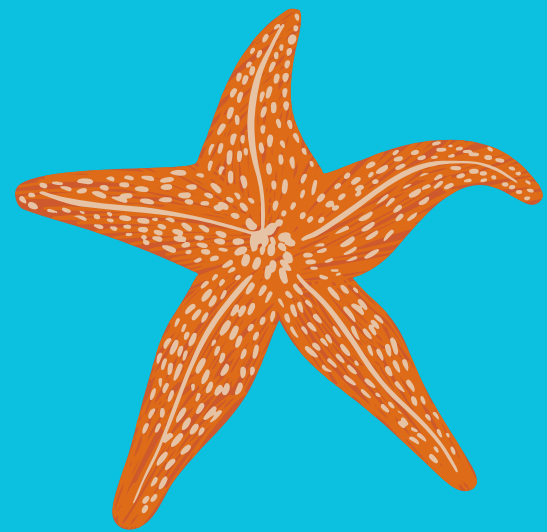

Mussels can live for up to 50 years.

Crabs walk sideways!

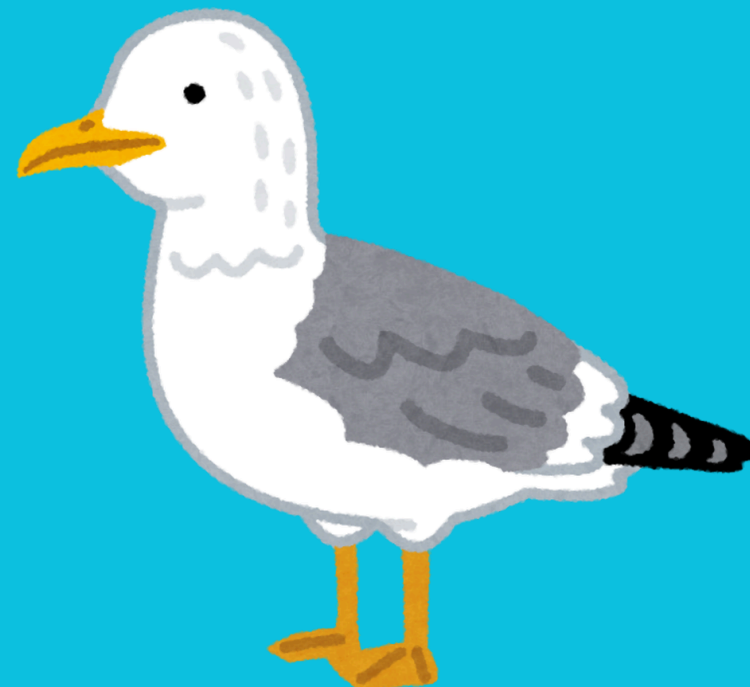

Many sea hares squirt ink to protect themselves from predators.

Sea stars can regrow their arms.

Sea anemones shrink up when they are touched or out of water.

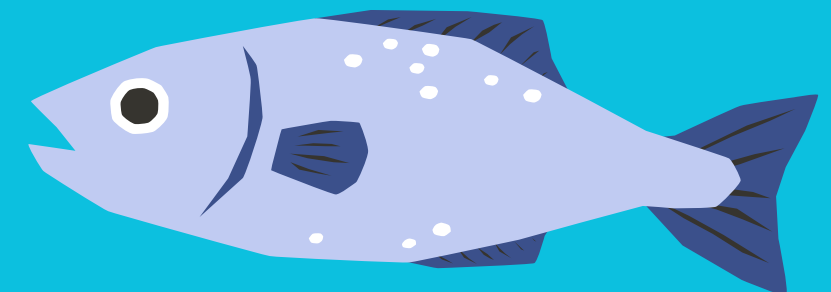

Sea gulls can drink fresh and salt water.

Hermit crabs change their shells as they grow. That's why we shouldn't take shells, they might become a hermit crab's house!

Tidepool sculpin are able to change color to camouflage themselves.

FIELD TRIP PLAN!

SAFETY:

1. Keep your eye on the ocean
2. Watch out for slippery rocks!
3. Look with eyes not hands
4. Leave the beach better than we found it

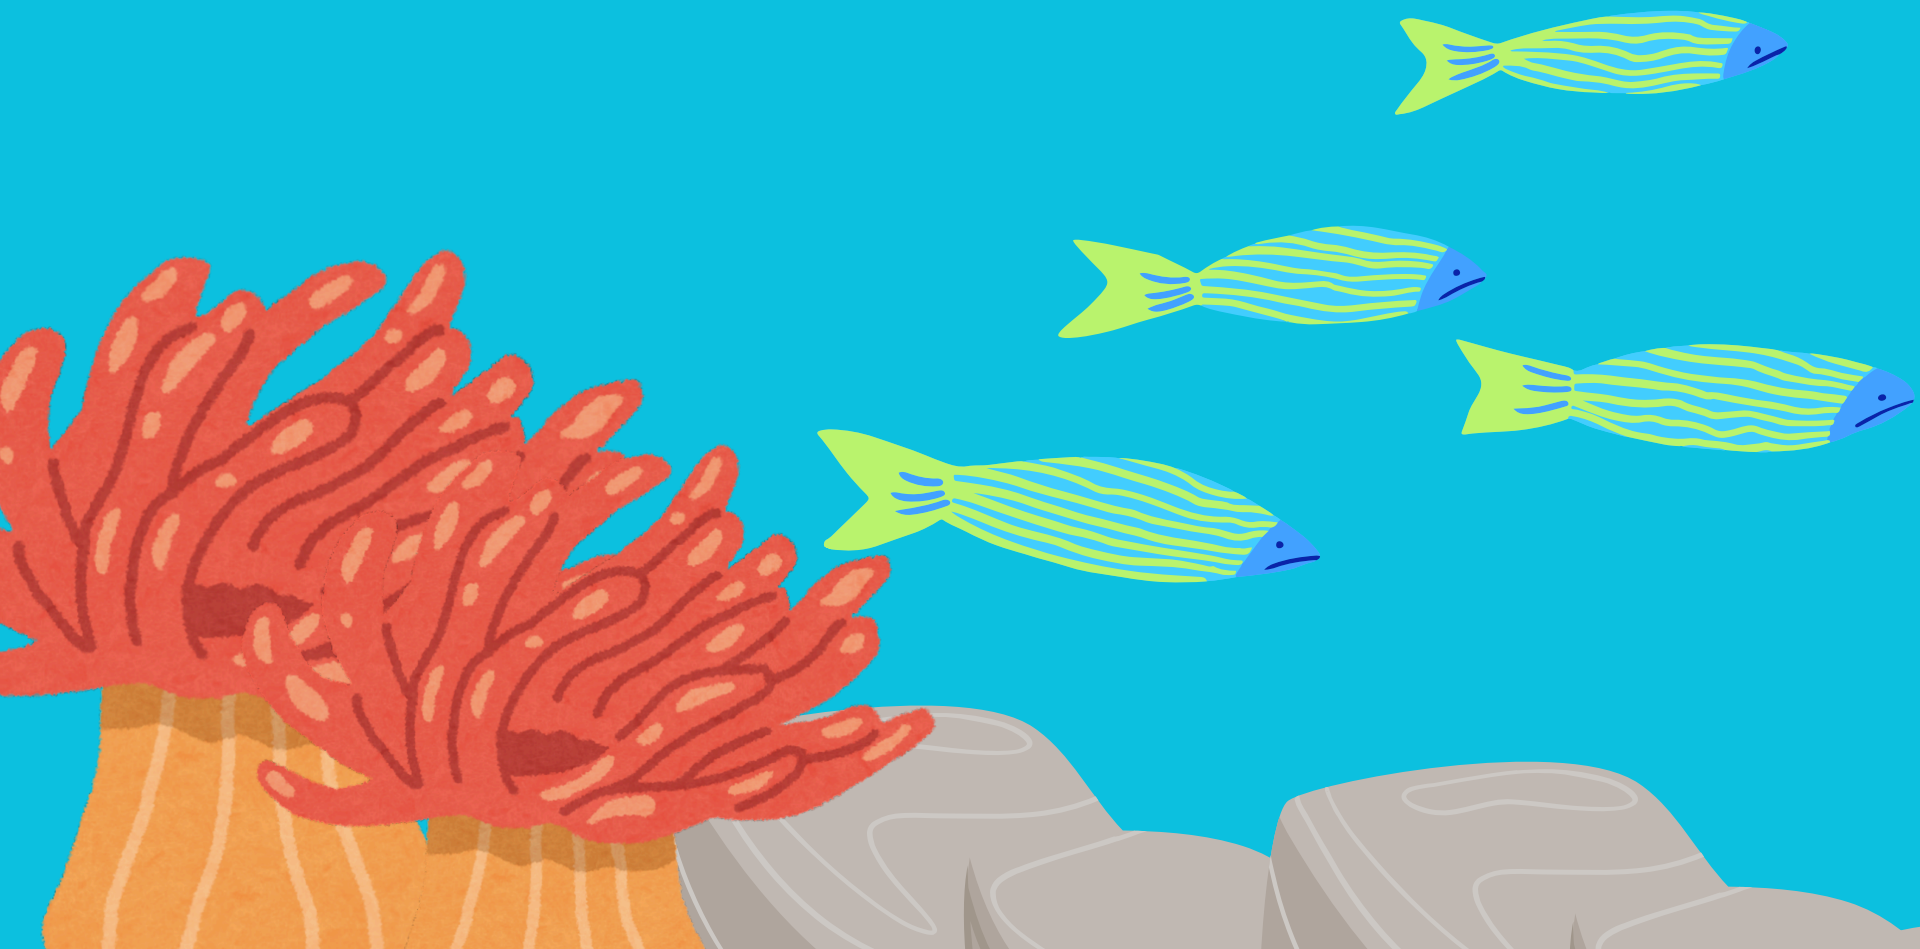

When you find something:

Draw it!

Find it on your paper (ask for help if you need it!)

Write its name and an observation

Keep exploring!

Woody Sculpin

7in
(18cm)

Octopus

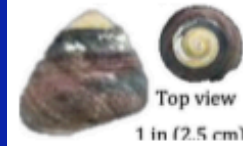

< 15ft (< 5 m)

Moray eel

Turban snail

Top view
1 in (2.5 cm)

California mussel

5 in (13 cm)

Sand dollar

4 in (10 cm)

Gooseneck barnacle

High
3 in (10 cm)

Hermit Crab

1 ½ in
(4 cm)

Striped shore crab

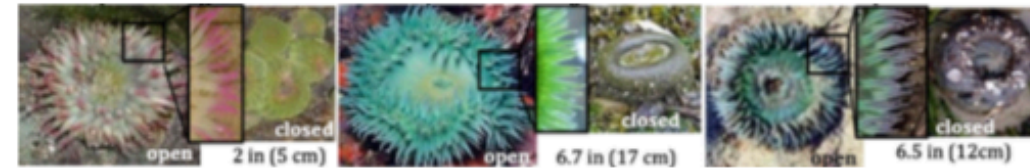

1 ½ in
(4 cm)

California Spiny Lobster

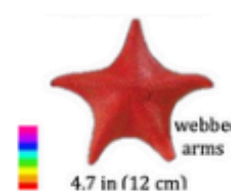

12 in
(30 cm)

Sea anenomes

Bat star

webbed
arms
4.7 in (12 cm)

Brittle star

Various sizes
Long thin arms

Ochre star

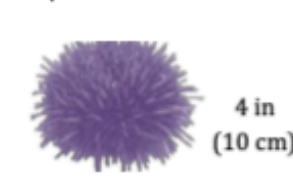

10 in
(25 cm)

Red urchin

7in
(17 cm)

Purple urchin

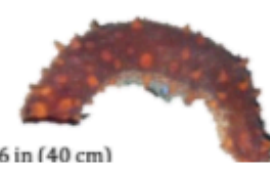

4 in
(10 cm)

Sea Hare

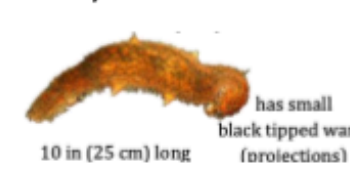

16 in
(40 cm)

California sea cucumber

16 in (40 cm)

Warty sea cucumber

has small
black tipped warts
(projections)
10 in (25 cm) long
